

Video Review (Zoom, 2 Oct 2026): Edit Notes and Transcript, Part 1

How to use these files: Part 1 has the context, the edit list, the open questions and the first half of the transcript. Part 2 has the rest of the transcript. Please read both parts together.

1. Context

- **Who:** Mac (video editor) and Ed Strachar (client/boss, the reviewer) reviewed the promo video "Reading Genius" (about 24:22 long) on Zoom for 1h17m. Jane is Ed's assistant and supplies testimonial clips. Chad is an assistant who was not on the call.
- **Video reviewed:** the newest version of "Reading Genius.mp4" in Frame.io, shown on screen by Ed.
- **Goal:** cut roughly 2 minutes, fix awkward edits left by the previous editor (Dion), and insert testimonial clips and graphics at specific points.
- **Times:** *Video timecode* (hh:mm:ss:ff , 24 fps assumed) is the position in the video, read off the Frame.io player. *Zoom time* (h:mm:ss) is the position in the call and transcript. They are different.
- **Transcript caveats:** it is auto-generated Zoom speech-to-text, so it is noisy. Zoom labeled almost every line "Ed Strachar", including the video's own audio playing during the share, so the label is dropped here. Only Mac and Jane are labeled. Tell Ed's instructions ("cut this", "take this out", "right there") apart from the video's narration by context. Ed paused, replayed and scrubbed, so timecodes can be a few seconds off. Some off-topic chatter and one-word fillers ("yeah", "okay") were removed, and gaps are marked [omitted].
- **Frame.io:** every item below was also posted as a timestamped comment on that video version (31 comments).

2. Edit list (video order)

Tags: CUT remove, INSERT add testimonial or graphic, KEEP, FIX repair, CHECK unclear or contradictory (confirm with Ed). Where Ed changed his mind, the item says what he said first and which instruction wins.

- **S0** [video 00:00:00:00; Zoom -] REVIEW NOTES (Zoom review, 2 Oct 2026, Ed + Mac + Jane).
Comments below are the edit list in video order. Tags: CUT = remove, INSERT = add testimonial or graphic, KEEP, FIX, CHECK = unclear or contradictory, confirm with Ed. Where Ed changed his mind, the comment says what he said first, what he said later, and which one wins. Timecodes are approximate: Ed paused and scrubbed during the review, so use the quoted lines to find the exact point. Overall: the cut currently runs about 24:22 and Ed wants roughly 2 minutes removed, then the testimonials added. Open items: Jane to send the original file for the hook gap, the Dawn Graves clip and the Terry Weinberg video; Chad to send the basketball study citation; Ed to send the Asher bio and the Fathom notes.
- **C1** [video 00:00:03:19-00:00:12:12; Zoom 0:03:23–0:03:48] CUT/FIX: Hook: remove the clutter around Ed. Only Ed should be on screen. Said twice in the review ('it should just be me', 'this just needs to be me').
- **C2** [video 00:00:22:17-00:00:25:07; Zoom 0:04:00–0:04:15] FIX: Hook continuity gap here. Fill it with what Ed says just before this line in the ORIGINAL file (Jane is sending that file).

- **C3** [video 00:00:25:07-00:00:38:00; Zoom 0:04:36–0:06:50] CUT: Remove the repeated Auckland / Auckland Normal lines (Ed: 'all redundant', 'unnecessary'). Keep the Alaska story and its B-roll.
- **C4** [video 00:00:55:16; Zoom 0:07:15] KEEP: CONTEXT: Ed first said to cut the 'adults take longer... more disbelief... self-doubt' line, then reversed a few seconds later: 'Actually, you can keep that in.' Final decision = KEEP it, and keep the GOOYOW (Get Out Of Your Own Way) line too.
- **C5** [video 00:01:24:13-00:01:26:07; Zoom 0:08:12–0:08:46] FIX: Use the NEW re-recorded take of 'Realize this. You opened your eyes at birth.' (Ed sent the clip on Telegram) to fix the jump here ('discontinuity'). Ed asked for 'Take 2'.
- **C6** [video 00:02:01:16-00:02:14:16; Zoom 0:10:20-0:12:19] CUT: Remove the hunter/caveman peripheral-vision story, from here to 00:02:14:16. Resume at "When I coached basketball players...". Ed: take out a lot of the stories. CONTEXT: Ed first said 'let's take this out' and 'take that out' about the basketball lines, then appeared to clarify he meant the periphery/hunter part ('we cut out the part about the hunter... come back in, When I coached basketball players').
- **C7** [video 00:02:17:10; Zoom 0:12:34] INSERT: Show the graphic for Ed's program 'Mental Training for Life, Sport and Success' when he mentions it. Ed will supply the image.
- **C8** [video 00:02:29:08-00:02:46:02; Zoom 0:15:03–0:15:36] CUT: Remove the East German weightlifters story and resume at the foul-shots example. CONTEXT: Ed said 'we don't even need this, take this out', but then re-read the story and said 'come in here' before the next one, so the exact resume point is unclear. The next line says 'another famous story': change it to 'a famous story' once this is cut. CHECK with Ed if unsure.
- **C9** [video 00:02:58:18-00:03:15:13; Zoom 0:16:44–0:17:41] INSERT: On-screen reference/citation for the basketball mental-training study (23-24%). Chad is to supply the study details and Ed will also send them on Telegram. Ed: 'there's always someone that's going to check on that.'
- **T6** [video 00:03:54:19; Zoom 1:06:38] INSERT: Testimonial: Jonathan Ezzie (roller hockey), right after 'Would you agree?' Use 'I did the course two weeks ago... 195 pages. It is absolutely phenomenal.' CHECK: Ed mentioned a crop on this clip ('that's all under there'). Confirm which part of the frame to remove. Jane is sending the clip.
- **C10** [video 00:05:01:18-00:05:06:16; Zoom 0:19:41–0:20:29] CUT: Remove the repeated 'open your eyes at birth / mom and dad' block (Ed: 'we already saw this', 'obviously redundant'). Use the phrase from the original at video 1:28 ('let me share with you...'). CHECK: the review audio is unclear here, so confirm the exact lines with Ed.
- **C11** [video 00:05:22:01-00:05:22:08; Zoom 0:20:44–0:21:00] FIX: Tighten the join to '...You never needed lessons. When you learn to read, 3, 4, 5, 6 years old...'. CHECK: the cut points were unclear in the review.
- **G1** [video 00:06:49:23; Zoom 0:22:28–0:23:26] FIX: Audio-channel diagram: label the lines and make the AUDIO channel much smaller and thinner (weak) next to the visual 'fiber-optic superhighway' channel. Jane: 'smaller, yellow'.
- **T7** [video 00:07:35:12; Zoom 1:09:18–1:09:26] INSERT: Testimonial: Deborah (eyes / reading glasses), after '...read one word' and before 'it even gets worse'. Use 'I can actually see larger sections of the page...' to '...which is fantastic' (drop the repeat). CONFLICT: Ed also placed Martin Crowe at this exact spot (next comment). Ask Ed whether Deborah replaces Crowe or Crowe moves elsewhere.
- **T3** [video 00:07:41:12; Zoom 0:58:31] INSERT: Testimonial: Martin Crowe, 'I began to read a third of a page at a time', right before 'it even gets worse'. CONFLICT: Ed later put Deborah at this same spot

(previous comment). Ask Ed which one stays here.

- **T5** [video 00:09:29:22; Zoom 1:03:17] INSERT: Testimonial: Sonya (11 years old, Australia), after 'What if you could employ that intelligence while reading? ... I'll show you how to do that.' Use 'I read 117 pages in 6 minutes. Did you understand better? Yes, much better. What was different? I really got into the book... I hope I can do that with all the books I read.' Cut 'Feel like I understood him? Yep' and 'Oh wow'. CONTEXT: Ed first said to start from 'I read a hundred', then said 'cut that out', so the final trim is the 117-pages version.
- **T2** [video 00:11:31:00; Zoom 0:56:12–0:57:57] INSERT: Testimonial: Dawn Graves (schoolteacher), right after 'regardless of whether it's a story or a book on science, it doesn't matter'. Line: '...and I felt them. They were scary stories, so I kind of scared myself.' STATUS: Jane had not found the clip yet. She is sending it.
- **T8** [video 00:12:34:18; Zoom 1:10:45–1:11:03] INSERT: Testimonial: medical student (Will/Willie Harper): 'At the end I was reading about 10 pages a minute... I used to read a page a minute.' Place just before 'However, that's a standardized test'. CHECK: Ed trailed off ('we take that... put that...'), so this placement is inferred.
- **T9** [video 00:13:34:18; Zoom 1:12:01] INSERT: Testimonial: George Owidi, right before 'So you want proof?' Ed asked for more diversity among the testimonials and this one covers it.
- **T1** [video 00:15:25:10; Zoom 0:53:28–0:55:37] INSERT: Testimonial: Michael Tracy (spell M-I-C-H-E-L T-R-A-C-Y), inside the Silicon Valley principal's-son story. Keep it tight and quick. Use 'I went from reading a third of a page a minute to 60 pages a minute' (somewhere around 35-45 seconds into his source file). CHECK: Ed said 'we'll find an exact number' for the in-point. Confirm with him.
- **G2** [video 00:17:32:13-00:17:54:09; Zoom 0:36:59–0:42:23] INSERT: Dr. James Asher photo + bio graphic for the last ~15 seconds of this segment, ending at '...so yeah, he was right on'. Use the formal Wikipedia/encyclopedia-style version, TOP HALF ONLY (San Jose State University, birth and death dates, Professor Emeritus, Total Physical Response). CONTEXT: the first version (colorful, cartoony) was rejected and the first files would not load. Ed is sending the final version on Telegram.
- **C13** [video 00:19:20:13-00:19:21:04; Zoom 0:44:58–0:45:30] CUT: Remove 'this is 2026 going on 27 real fast'. Keep '...we got AI, artificial intelligence'. Ed: 'this is out'.
- **C12** [video 00:19:21:01-00:19:22:23; Zoom 0:43:58–0:44:50] FIX: Undo the previous editor's (Dion's) edit in the mind-mapping / Tony Buzan section: the Buzan selfie and 'writer's block' lines repeat. Play them once. Frames approximate: Ed was scrubbing here.
- **T4** [video 00:21:46:21; Zoom 1:02:28–1:02:43] INSERT: Testimonial: Terry Weinberg (Coast Guard Auxiliary, read 5 books, 85% on the test). Use the whole clip, right after 'Which three books would you read first, and why?' CONFLICT: Ed first said to put it after 'I love health' (see the health-lines comment further on), then later said after 'which 3 books'. Latest instruction wins = after 'which 3 books'. Jane is sending the actual video (Ed only showed a still).
- **C14** [video 00:21:47:09-00:21:52:18; Zoom 0:49:29–0:49:54] FIX: Duplicate / clumsy edit: the conscious/subconscious paragraph and 'which 3 books...' repeat. Ed: 'that's a real clumsy edit'. Remove the repeat. Frames approximate: Ed replayed this part.
- **C15** [video 00:22:14:09-00:22:22:01; Zoom 0:59:34–1:00:12] CUT: Health lines: cut 'with their drugs and (toxic) surgery... debilitating, painful'. Resume at 'Yeah, I want to stay away from that. I love health.' CONFLICT: Ed first said to stop at 'staying out of the hospital', then later kept 'in doctors' clutches' and cut

after it. Confirm the exact cut point with Ed. Also note Terry Weinberg was first placed after 'I love health' but that was superseded (see T4).

- **G3** [video 00:22:29:08; Zoom 0:50:36] INSERT: Show the Healing Genius logo when he says 'Healing Genius'.
- **G4** [video 00:22:29:12-00:22:43:14; Zoom 0:50:42–0:50:57] INSERT: Show the discount code ED777 on screen while he says it.
- **G6** [video 00:24:01:22; Zoom 0:52:20–0:52:28] FIX: Swap the visual on screen for a gender-neutral figure with no crossed legs (Ed's note while this part played). CHECK: Ed did not name the exact shot. Confirm which one.
- **G5** [video 00:24:20:02; Zoom 0:52:47] INSERT: Show the discount code (ED777) again at the sign-off ('much love to you, I'm Ed Stracher, thank you for watching').

3. Open questions and who owes what

- **Martin Crowe (T3) vs Deborah (T7)**: Ed put both "right before it even gets worse". Does Deborah replace Crowe, or does Crowe move?
- **Michael Tracy (T1)**: Ed said "we'll find an exact number" for the in-point and never gave one.
- **Jonathan Ezzie (T6)**: Ed mentioned a crop ("that's all under there"). Which part of the frame?
- **Medical student (T8)**: placement is inferred. **C10, C11**: the audio was garbled. **G6**: Ed did not name the shot.
- **"I'll see you Monday"**: likely 5 Oct 2026. Delivery or next review?
- **Jane to Mac**: original file for the hook gap (C2), Dawn Graves clip (T2), the Terry Weinberg video (T4), review notes. **Chad**: basketball study citation (C9) and a loadable Dr. Asher bio. **Ed**: final Asher bio, Fathom notes, Telegram assets.

4. Transcript (format [h:mm:ss] = Zoom time; unlabeled lines are Ed or the playing video)

[0:00:01] [omitted: pre-call chatter]
[0:00:24] I appreciate you taking this over.
[0:00:32] [omitted: off-topic]
[0:01:05] okay so I'll give you in telegram
[0:01:13] The Frame.io version working with...
[0:01:21] **Mac**: The last revision.
[0:01:40] [omitted: bathroom break]
[0:03:06] Everything come out okay?
[0:03:20] What percent of all books purchased?
[0:03:21] Never get red past the first time.
[0:03:23] Okay, so this is his hook.
[0:03:26] But you got too much around me.
[0:03:29] It should just be me.
[0:03:31] Can you follow? There's too much clutter here.
[0:03:37] Can you imagine that?

[0:03:38] 90%. The average American, it's been said, reads less than one book a year. Now, to watch 4 hours... Again, this just needs to be me.

[0:03:48] See, this is, for TV, or more... less than one book.

[0:03:53] What's happening with their intelligence as they're watching 4 hours of TV?

[0:04:00] When people see people reading... Okay, so right here... There's a gap.

[0:04:07] There's a continuity gap.

[0:04:09] And if you go to the original file, what I say before this can fill that in.

[0:04:15] You follow?

[0:04:21] done it So, Jane is gonna be sending you that.

[0:04:36] My dad there, it's very hard for him to

[0:04:39] In fact, in this school, in Auckland, New Zealand, where I was giving seminars at Auckland Normal in Tumi.

[0:04:46] Okay... At Auckland, normal intermediate and Auckland can come out.

[0:04:50] It's all redundant.

[0:05:22] Now, I'm looking for the script...

[0:05:51] Okay, I don't have it.

[0:05:55] in Auburn.

[0:05:56] And they invited me in to teach. This is cool and all that.

[0:06:00] Alright, so there's a school in Alaska, so... Here, you keep the B-roll.

[0:06:08] But you can just...

[0:06:13] Was me in the teach. This is cool in Alaska. This took two and a half hours. So you come back in here. You can see people reading like that there. It's very hard for them to read.

[0:06:23] In fact, in this school, in Auckland, New Zealand, where I was giving sep... So, in Auckland, New Zealand, where they invited me in to teach.

[0:06:32] I was giving seminars, and they invited me in to teach.

[0:06:37] All this at Auckland Normal is unnecessary.

[0:06:43] Okay, use your common sense, you'll see.

[0:06:47] in Auburn.

[0:06:48] And they invited me in to teach.

[0:06:49] This is cool in Alaska. This took two and a half hours.

[0:06:53] These kids are a little older.

[0:06:54] 14 to 17, about. These adults took an entire day. Adults take a little longer, because they have a lot... Adults take a little longer cut.

[0:07:06] Cut out because they have a lot more disbelief.

[0:07:09] More disbelief, they have a lot more self-doubt, and that all blocks them, so.

[0:07:15] Actually, you can keep that in.

[0:07:18] I have a saying, GUYO. G-O-O-Y-O-W. Get out of your own way. And that's what we need to do in order to read like this. So let me explain to you how this works, so that you understand

[0:07:31] buy into The concept... And the simple premises that this is based on, and once I... Calling Jane.

[0:07:47] I tell you this, you're gonna realize AI can do

[0:07:52] But B, how incompetent that incredible place called the school system

[0:07:59] You opened your eyes at birth. You could see mom and dad and the doctor, the nurse.

[0:08:07] So, there's a discontinuity here.

[0:08:12] Really, yeah.

[0:08:13] open So, again, realize this, I need to say, realize this.

[0:08:21] Let me just send it to you in case it's not there.

[0:08:25] I believe it is there.

[0:08:40] Realize this.

[0:08:42] You opened your eyes at birth.

[0:08:45] Take 2.

[0:08:46] Realize this. You opened your eyes at birth.

[0:08:51] Okay, so now we got the recording on the... Zoom video.

[0:08:56] And, and the one I just sent you.

[0:09:06] [omitted: off-topic]

[0:09:24] I'm giving him the instructions I gave Dion.

[0:09:28] You could see mom and daddy, the doctor, the nurses, I'm guessing.

[0:09:34] The birds, the trees, the cars, the dogs, everything, all at the same time, at the speed of light. You never needed lessons.

[0:09:43] Yeah. So, first off, let's just work and talk about our vision. Your eyes. There's two elements to your vision. There's the focal vision, and there's the peripheral vision.

[0:09:54] But the peripheral vision is actually about two-thirds of your

[0:09:57] It's got two-thirds of the rods and cones, approximately.

[0:10:00] And... they theorize, well, when man was hunting in a caveman, he had to, you know, watch, and he was attacked by the side... from the sides, and so he had to really pay attention to his periphery. The periphery is what we respond to much quicker. When I coached, basketball... Okay, this is how.

[0:10:20] actually... Hold on.

[0:10:29] Yeah, let's take this out.

[0:10:32] Cut, right here. Basketball players. And did mental training with these basketball players. Mental training is a big part of reading.

[0:10:39] train

[0:10:51] Okay, I want to take out a lot of the stories. You never needed lessons.

[0:10:57] Yeah, so first off, let's just work...

[0:11:01] The peripheral vision is actually about two-thirds of your vision. It's got two-thirds of the rods and cones, approximately.

[0:11:07] And... Cut, right before end.

[0:11:12] They theorize, well, when man was hunting in a caveman, he had to, you know, watch and he was attacked by the side, from the sides and so he had to really pay attention to his periphery. The periphery is

[0:11:23] Come back in here.

[0:11:25] What we respond to much quicker. Wayne and I... This is out.

[0:11:30] Actually, you can take out that periphery.

[0:11:35] Take that out. Coached, basketball players and did mental training with these basketball players. Mental training is a big part of reading genius, training the mind to perform better.

[0:11:47] You train the mind to perform better, the body performs better. Body can even get stronger.

[0:11:52] mental training. There's a famous story about East German weight. Okay.

[0:12:03] So, we cut out the part about the hunter.

[0:12:07] We cut out this.

[0:12:11] And you come back in, When I coached basketball players.

[0:12:16] Come back in here.

[0:12:19] basketball players, and did mental training with these basketball players. Mental training is a big part of reading genius, training the mind to perform better. You train the mind to perform better... Now, when I say I did mental training.

[0:12:34] You show one of my program mental training, For life, sport, and success.

[0:12:42] And... I'll give you that.

[0:12:47] Here, in just a moment.

[0:13:08] This is what it looks like.

[0:13:11] Okay, so you bring that up... And...

[0:13:17] I'll, again, put it in your file here.

[0:13:26] [omitted: off-topic healing talk]

[0:14:35] Back here now, so... Mental training...

[0:14:40] We've got to give you that... Okay, there you have it.

[0:14:47] with these basketball players. Mental training is a big part of reading.

[0:14:50] It's training the mind to perform better. So even here, you would have the program right here?

[0:14:57] Better, you train the mind to perform better, the body performs better, body can even get stronger.

[0:15:03] There's a famous story about East German weightlifters, and they would mentally train... Actually, we don't even need this.

[0:15:12] Take this out. Famous story.

[0:15:16] stronger mental training. There's a cut.

[0:15:20] There's a famous story about East German weightlifter.

[0:15:24] And they would mentally train lifting 500 pounds, or however many pounds they were lifting, and they would literally mentally rehearse that.

[0:15:34] And they got incredible results.

[0:15:36] There's another famous story.

[0:15:38] Come in here.

[0:15:41] An example of two...

[0:15:44] groups of people and they were each training them to shoot foul shots, best of all.

[0:15:48] And one team just got training on the physical court.

[0:15:52] Okay, now I'm gonna give you this study.

[0:15:55] I have this study.

[0:16:00] Chad, can you give me that study about the basketball mental training 23 and 24% that we talked about the other day?

[0:16:22] Chad, can you please give me that...

[0:16:25] Study citation about the mental training in basketball.

[0:16:30] 23 and 24% that we talked about the other day.

[0:16:44] Okay, you're just gonna put reference over here, reference, and I'm gonna give you the study details.

[0:16:58] And foul shots and another team didn't get any physical training, they got mental training, mentally rehearsing, shooting the foul shots in their mind. So when they compared after a certain amount of training.

[0:17:09] groups both group and crew dramatically.

[0:17:13] From where they started, and...

[0:17:20] There it is.

[0:17:36] So, you just cite that, I'll put it in Telegram.

[0:17:41] You just put reference.

[0:17:51] There's always someone that's gonna check on that.

[0:17:55] And the interesting thing was, they each improved to about the same level. So, whether they had the physical training or the mental training, they each improved to about the same level. Now, the real question is, what if they had both the physical and the mental training? Well, that's optimal.

[0:18:08] And that's what crows do.

[0:18:10] The physical and the medical.

[0:18:12] Well, in Reading Genius, we do the mental training, the physical training in the book, it's just Two pages.

[0:18:18] Trivial.

[0:18:19] Like basketball or weightlifting.

[0:18:20] You work brilliantly. Once your mind understands exactly what

[0:18:25] You're fully committed, and full commitment is always what it takes for you

[0:18:30] And us, to perform at our best.

[0:18:33] Would you agree?

[0:18:33] And so, using both your focal and peripheral vision is key when reading. Now, just by knowing that isn't going to help you read faster. Why? Because your habitual

[0:18:45] Nature is to read word by word. And if you're really good, and by profession, lawyers, generally speaking, are probably the best readers.

[0:18:53] They have to be.

[0:18:54] law school without me.

[0:18:56] And they read somewhere between 400 and 600 words a minute, in my observation.

[0:19:00] Which is about double.

[0:19:02] triple the average.

[0:19:03] It's still way below what many graduates of the

[0:19:08] But for starters, they're among the best.

[0:19:11] Now, with that being said, instead of reading one word at a time, they're reading maybe

[0:19:16] Crazy. And as we...

[0:19:19] Start reading in phrases and groups of words we understand better, because we actually think and remember in ideas, not words.

[0:19:26] the concepts we often remember.

[0:19:28] In pictures, okay, visual concepts.

[0:19:31] and physical concept.

[0:19:32] So with the Reading Genius system, you not only learn to use your peripheral vision.

[0:19:38] We break the habit of pronouncing each word.

[0:19:41] Let me share with you.

[0:19:42] When it comes to your vision, I want you to think.

[0:19:46] Open your eyes at birth.

[0:19:48] You could see mom and dad and your doctor.

[0:19:51] We already saw this.

[0:19:54] When it comes... See, actually, This, let me share with you this, is what you could use...

[0:20:01] At the beginning, when we were looking for an inn.

[0:20:04] At 1:28.

[0:20:06] You with me?

[0:20:07] your peripheral vision.

[0:20:09] break the habit of pronouncing each word. And let me share with you.

[0:20:13] Let me share with you this, there it is.

[0:20:15] That's what he didn't use at 128. So there you have your phrase.

[0:20:22] And that, this comes out, this is obviously redundant.

[0:20:25] So that comes out.

[0:20:27] I want you to think.

[0:20:29] You open your eyes at birth.

[0:20:31] Coming in.

[0:20:32] going out. That's our first... you're looking at all coming in.

[0:20:36] At least I did. Everyone I know, Sam and Shev were up at the same time.

[0:20:41] At the speed of light.

[0:20:42] You never needed lessons.

[0:20:44] You learn.

[0:20:45] Right here.

[0:20:48] Marjorie?

[0:20:50] Come in.

[0:20:52] When you learn to read.

[0:20:55] Come in right there.

[0:20:58] You never needed lessons.

[0:21:00] When you learn to read, 3, 4, 5, 6 years old, you had to pronounce the word one syllable at a time, Chevrolet.

[0:21:09] the car went up the hill, Mississippi, right? And then, at some point, you had to stand up, at least I did, everyone I know, stand up in front of the class.

[0:21:21] heat coming in.

[0:21:23] going out.

[0:21:24] looking at all the worse.

[0:21:26] Many of them you've never seen before, and you mispronounce.

[0:21:30] What happens? What does the rest of the class do? Yeah, they giggle. And that's our first entry into public speaking.

[0:21:37] What's the number one fear ahead of death, ahead of getting ripped apart by a lion?

[0:21:42] How are you getting... rolled over by an ET.

[0:21:45] The number one fear among people.

[0:21:47] worldwide.

[0:21:49] Public speaking.

[0:21:50] We taught him that fear in reading class.

[0:21:52] And public speaking is not a natural fear. I mean, most... most babies will get up, you know, peanut butter on their face in diapers and dance for you. I mean, you know, they're not shy of performing, okay? But after reading class, boy, standing up and reading or presenting in front of a group.

[0:22:08] terrifying.

[0:22:09] from that experience.

[0:22:11] This is what certified teachers actually taught. So you learn to read one word at a time.

[0:22:17] Because you can only pronounce one word at a time, at the speed of sound. And through a very limited

[0:22:23] neurological pathways.

[0:22:25] We call it the audio verbal channel.

[0:22:28] Keep it simple. Your eyes, however, your eyes...

[0:22:33] You need to label this audio channel.

[0:22:38] And it needs to be smaller and thinner.

[0:22:41] Because we're comparing it to the visual cortex in the eyes.

[0:22:44] neurological pathway.

[0:22:46] We'll call it the audio...

[0:22:49] Keep it simple. Your eyes, however, your eyes are basically an extension of your brain. When a baby is formed inside the mother's womb.

[0:22:56] The eyes are literally part of the brain, and it's one organ that... I can't hear you, man. What?

[0:23:02] **Mac:** Clarification, I should label the lines.

[0:23:08] Yeah, audio chat.

[0:23:10] Audio channel, and make it smaller and skinnier.

[0:23:14] **Mac:** And.

[0:23:14] supposed to look very.

[0:23:15] **Jane:** smaller yellow.

[0:23:19] Audio channel.

[0:23:21] And it should be very small and weak.

[0:23:23] In comparison.

[0:23:26] Keep it simple. Your eyes, however, your eyes are basically an extension of your brain. When a baby is born.

[0:23:32] inside the mother's womb. The eyes are literally part of the brain.

[0:23:36] And it's one organ that then becomes That neural pathway Often referred to as

[0:23:44] It's like a huge fiber optic superhighway.

[0:23:47] The verbal is, like, a little... Dirt bypass.

[0:23:51] Two cans and a string, as opposed to this big fiber optic, multiple fibers.

[0:23:57] That exists between the eyes and the brain.

[0:24:00] Good birth and everyday blessings.

[0:24:01] So, imagine what's possible, then, if you could read using that superhighway.

[0:24:08] It works at the speed of light and can see everything it wants.

[0:24:11] Versus how you've habitually been trained to just read one word.

[0:24:16] Yeah. It even gets worse, though, you see, because before books were mass-produced, they thought that not everyone had the capacity to read.

[0:24:25] That only special people, only aristocrats, and children of kings and queens, because books were very expensive, they were hand-copied at the time. So they only showed certain people how to read.

[0:24:39] which were... wealthy.

[0:24:41] Well, then as books...

[0:24:43] It became mass-produced after the invention of the printing press. They realized that everyone could read, and wow, they were a big breakthrough. Yeah, it was in the 1500s. They haven't changed the way they taught reading since the 1500s.

[0:24:54] Alright, we've made all these... incredible inventions and progress.

[0:25:00] in evolutions.

[0:25:03] in technology.

[0:25:04] transportation Communications, automation, and brain... understanding and inventions.

[0:25:12] Developments, and so forth. And yet, we still teach reading the same way.

[0:25:16] It's pathetic. Really pathetic.

[0:25:19] So now, we read Expanding Our Vision, we break the habit, and we Use that neural pathway.

[0:25:26] Really powerful concept. Follow me. And this is something you already have, I don't have to teach you this.

[0:25:32] All we have to do is break the habit that you learned in school, and that habit is not broken.

[0:25:37] for years now.

[0:25:40] In 10 minutes.

[0:25:42] minutes But there's more. We have this incredible heart. The heart literally has brain cells in it.

[0:25:49] And there's actually two hearts. There's the physical heart that pumps blood, and there's the spiritual heart that pumps love. Both of them have incredible intelligence.

[0:25:59] Wisdom.

[0:26:00] and higher connections.

[0:26:02] Yeah. What if you could employ that intelligence while reading?

[0:26:08] I show you how to do that.

[0:26:09] Our brain. There's a right brain and a left brain. This only came out in 1975. Roger Sperry.

[0:26:16] Nobel Prize for his research in understanding difference between right and left

[0:26:20] And simply put, the left brain Sequence, logic, and language

[0:26:25] And language is sequential, right? John chased Sally up the hill. Well, the right brain is where feelings, emotions, pictures come from. Well, the right brain is dormant.

[0:26:37] It's not used. So, while the left brain is trying to read, the right brain

[0:26:41] is unemployed, and what do typical unemployed people do? They talk to themselves and watch movies.

[0:26:47] What are people's biggest challenge when they read? They talk to themselves and daydream. They're thinking of 5 or 10 other things while they're reading.

[0:26:54] Know anybody like that? Yeah. So, when we get the right and the left brain fully employed in

[0:27:02] Wow. I teach kids and adults how to create this book into a movie.

[0:27:08] I teach you...

[0:27:09] you learn how to connect to the spirit of the author, or authors, of the book. So, you're reading Macbeth, you connect to Shakespeare, you understand

[0:27:19] You feel, you sense, right? You're reading 7 Habits of Highly Effective People.

[0:27:23] Send us Dr. Stephen Covey, okay, or whatever authors you are.

[0:27:28] Boy, that's really powerful. It literally magnetized.

[0:27:32] Your whole mind, body, and soul to the book. This is when you

[0:27:38] Now, I show you how to do this with a book. I show you how to build and utilize all these natural

[0:27:44] intelligences within you.

[0:27:46] not giving me You already have them, you've never been shown, for the most part, for most people.

[0:27:53] How to use them.

[0:27:54] It gets better. We have this thing called PLD.

[0:27:58] Emotions.

[0:27:59] Emotional intelligence.

[0:28:01] Well, what if I could show you how to get your emotions and your feelings involved so you can feel what's happening in that book? And regardless of whether it's a story or a book on science, it doesn't matter. You have emotional intelligence.

[0:28:13] You have physical intelligence.

[0:28:16] Distributed throughout your body, your brain is

[0:28:20] Often referred to as the center of your intelligence, but we know we have this nervous system, which is part of the brain.

[0:28:26] distributed throughout our entire body. And the intelligence is what we call a neural net. It's distributed through the entire body. So, this is where, whether you're learning to play basketball, or tennis, or piano, you physically learn. This is part of physical intelligence.

[0:28:41] Well, there is intelligence value there.

[0:28:44] And what if we can employ that into the region?

[0:28:46] process.

[0:28:47] Wow! And that's what you learn exactly to do. Is it difficult? None of these kids, none of these adults thought so. No, these are simple processes.

[0:28:57] What's difficult is for you to overcome your limiting beliefs, saying, that's not possible, I don't believe that. You know, show me some proof, okay? Here's a letter from the U.S. Air Force Academy. Read it. Look. In a standardized test, after a few hours of instruction.

[0:29:14] students improved in speed 550% measured, and their comprehension improved. However, that's a standardized test.

[0:29:23] There's 3 paragraphs of multiple choice questions, which means they have to give you the answer, and you have to recognize it.

[0:29:29] Which is not really a true test of comprehension. It's just answer recognition.

[0:29:33] Then when we tested them the real way, a real test of reading.

[0:29:37] Using books. Not little multiple choice questions.

[0:29:40] Books.

[0:29:41] They got their textbooks.

[0:29:43] And look, the Colonel wrote, students reported reading in excess of 40 pages a minute. Excess!

[0:29:50] These books are 500 and 600 words per page.

[0:29:53] So, 40 pages a minute means 20 to 24,000 words a minute, or more. The Guinness Book of World Records is 25,000. So, we're in excess of that, some of the students. Not all, by all means, not all, but some, after one one-day class, because I showed them how to use their peripheral vision, the right and left brain.

[0:30:13] And more, as I claim here.

[0:30:15] So, you want proof?

[0:30:17] I've only got a couple of dozen schools. Here's one from California State Department of Education, where I got the opportunity to teach

[0:30:24] youth at risk, which is a nice way of saying grand larceny at 15. You know, kids that hotwire cars and steal them and break into houses and deal drugs and all those kinds of things.

[0:30:35] And I got to teach them this. And while their ethics and discipline may have been a little awry.

[0:30:42] kids were bright and intelligent, and when we got out the books and I had them do these exercises, they were keen, because these kids did not want to sit in a class, you know, with someone at the blackboard explaining, no. We got our physical, emotional, we got our heart, we got our

[0:30:58] We got everything involved, and that's a real picked up on.

[0:31:02] And here you see them.

[0:31:04] He's head of the school, talking about how the kids

[0:31:08] books at incredible rates. But look, I know you're probably asking, well, why don't all the schools, you know, adopt this? Well, that just shows you

[0:31:18] Because I brought this to the California State Department of Education in Sacramento, and I showed them all of my data and so forth. They couldn't give two

[0:31:27] Okay? This is a bureaucracy. Getting a... getting a school

[0:31:31] Change from number 2 to number 3.

[0:31:33] 3 pencils, probably take Okay, literally. I demonstrated this at one school. It was a progressive...

[0:31:41] private school in the Silicon Valley, where I used to live.

[0:31:45] The principal had a son in the 8th grade, and he invited me to come do a demonstration.

[0:31:50] 8th grade kids, and his son had reading challenge.

[0:31:53] I said, okay, sure. Came in, given, I think, 3-4 hours, including So the instruction was made.

[0:32:00] And his son, amongst all the other kids, said, wow, when you read fast, you get more focused, you understand better, it becomes much more exciting.

[0:32:07] Exactly. His father's looking there, he's stunned.

[0:32:12] Anyway, we tested the kids before and after, clearly, and at the end, they did a final test on a book, they finished a book.

[0:32:20] Okay, question for you. Jane, what if...

[0:32:24] We interject testimonials here when I state something, and then we interject a quick testimonial.

[0:32:32] Not anymore.

[0:32:33] **Jane:** Be more effective, yes.

[0:32:36] Okay, let me just ask my friends. Mac, you know my friends.

[0:32:39] Okay, so if I put some testimonials in, it would be more effective?

[0:32:44] Plus 2, plus 3, plus 4, plus 5.

[0:32:51] Alright, so...

[0:32:54] Send Mac... this... Okay, PowerPoint.

[0:33:01] Yeah, he'll...

[0:33:02] **Jane:** already has that.

[0:33:03] Okay, now, right here... We're gonna... Get Michael Tracy...

[0:33:11] Where is Michael? Okay, here it is.

[0:33:18] So, we gotta make these tight and quick.

[0:33:22] And it's Michael Tracy, M-I-C-H-E-L-T-R-A-C-Y.

[0:33:28] Wonder how you guys felt about the chorus lyrics? Ed was...

[0:33:31] Really with it, he was really straightforward, and... I learned how to read.

[0:33:37] From... A third of pays a minute.

[0:33:41] Okay, you're mad.

[0:33:42] Wow, okay. How would you compare your comprehension to before the courts? Well, at first, I guess...

[0:33:50] And are every of us?

[0:33:52] In the matter of, like, of course, like, a month, and I forget everything except for, like, the last chapter.

[0:33:56] Now, it's like, every time I read a book.

[0:33:59] My adrenaline like flows because you're reading so fast, you're just getting so into it.

[0:34:04] Right there. What made the big difference for you? Right there, that quote.

[0:34:09] So, that's from, like... Somewhere between 35 and 45 seconds, take that.

[0:34:16] Now...

[0:34:22] We're gonna, alright, we're gonna finish the video, then I'll tell you where to put what testimonials.

[0:34:51] Some were 5 minutes, the slow ones were 15 minutes on a book at their level.

[0:34:57] And afterwards he calls me into his office.

[0:35:01] And he says, Ed, great course, thank you for showing us, brilliant demonstration, I saw my son benefit amongst many of the other kids. He goes, but there's no way.

[0:35:09] can take this course into our

[0:35:11] And he goes, I know, Ed, you're gonna ask why not. He says, Ed, I got a budget of 10 books per kid per year. With your course, they'll finish that in the first month. He goes, I know what you'd say, Ed, give them the 9th grade books.

[0:35:24] What do I do?

[0:35:26] When they get to the 9th grade.

[0:35:28] He's telling me. He goes, Ed, I got 4 reading teachers on staff. They're not gonna do mental training and play music and have the kids do physical exercises?

[0:35:37] They're stuck in their old ways. What do I do? Fire them? There's no way I can adopt this system.

[0:35:42] This is what's out there, and that's when I made the decision to just sell it to the public direct, because the stupidity, inertia.

[0:35:50] Mass ignorance.

[0:35:52] Fear of doing something.

[0:35:55] is mind-blowing, Your honors.

[0:35:58] The word education comes from the Latin word educo, which means to draw out of. One of my greatest mentors taught me this.

[0:36:08] Alexander Edward, who wrote a book called Inner Wealth, Genius within.

[0:36:12] more. The genius is within.

[0:36:15] You have to get out of the way. You don't put it in and stuff it in.

[0:36:19] No.

[0:36:20] Yeah, education is.

[0:36:22] really messed up.

[0:36:23] Which is why many of the most brilliant people in whatever profession didn't come through the education system.

[0:36:29] The greatest fashion designers didn't go to fashion design school.

[0:36:37] The greatest moguls in the computer industry, you could argue Steve Jobs, Bill Gates, and so forth. They quit college. They didn't go through the traditional education system. And I'll never forget one professor who I used to...

[0:36:59] Chad, can you bring me that picture of James Asher?

[0:37:03] And the bio you made for me the other day, please?

[0:37:10] A talk with, who was a great teacher himself, said, that's because people who come through the educational system are blocked by the

[0:37:18] principles and...

[0:37:24] Chad, you made a bio of Dr. James Asher the other day for me. Can you bring it up up front, please?

[0:38:00] There he is.

[0:38:10] Okay, that's him.

[0:38:51] Can you give me a bio with, his actual picture, which I'm including here?

[0:38:57] San Jose State University.

[0:39:01] When he was born and died and I believe he was professor of the year, professor emeritus, whatever accolades he had include that in a nice bio mem.

[0:39:14] That I can include. Thank you, Chet.

[0:40:09] washed.

[0:41:24] 10% of all those purchased.

[0:41:26] It read past the first chapter. Can you imagine that?

[0:41:30] Name the equation.

[0:41:32] Then when we tell you that, what did the intelligence do to overcome your limiting beliefs? And that's not possible. I don't want to reinhouse this.

[0:41:44] Click, he goes, but the 9th grade... the zip

[0:41:50] go to fashion design school. The greatest through the educational system are blocked by the

[0:41:56] principles and boundaries around them, and someone without those principles and boundaries gets to try new things that no one ever thought of within the system. So, yeah, he was right on. So...

[0:42:10] Okay, we're going to insert here.

[0:42:13] And actually for the last 15 seconds, Dr. James Asher.

[0:42:17] And a little mem here, which Chad is making for us as we speak.

[0:42:23] If you're thinking, why is this adopted to the school system? Now you have your answer. But let's even continue.

[Transcript continues in Part 2, starting at Zoom time 0:42:28.]
